DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Malcolm J. Romano on 4/13/07.

The application has been amended as follows:

In claim 25, lines 9-10, delete "the sleeve having a length substantially coextensive with the length of the ferrite tube,"

Allowable Subject Matter

Claims 25-49 are allowed.

The following is an examiner's statement of reasons for allowance:

The feature of a cylindrical tube as a unitary structure solely of ferrite and an electrically conductive coil wound around the ferrite tube in a microstimulator as claimed does not appear to be shown or suggested by the prior art. Schulman et al (US 5,405,367) disclose a ferrite core 24;however, there lacks a teaching or suggestion that the core is cylindrical or that the core is continuous. Schulman et al teach away from the core being a unitary structure, "[t]he top half of the ferrite core is placed over the bottom half of the ferrite core and one end of the coil wire is soldered to a metallized pad, 32."

The Examiner is interpreting Applicant's claimed unitary structure of the ferrite tube to provide a continuous, uninterrupted field that concentrates the magnetic field to

Application/Control Number: 10/601,723

Art Unit: 3762

generate a stronger electrical signal than a device using a pieced-together ferrite material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Klosterman et al (US 7,177,698) disclose a related microstimulator with two ferrite haves.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Manuel whose telephone number is (571) 272-4952.
